Colorado PI Acquisition: Traffic & Lead Strategy

Owned-asset growth engineered around Colorado's 2025-26 legal shifts

Prepared for Brian Thackston · Digital Marketing Strategy · July 2026

WHY NOW

Two Colorado laws just redrew the market

HB24-1472 — caps raised (2025)

Non-economic damages cap rose to \$1.5M for most tort actions filed on/after Jan 1, 2025 (\$2.125M wrongful death; biennial inflation adjustment from 2028).

Serious cases are being valued under new math — education converts.

SB26-174 — lead-buying banned (Aug 2026)

Third-party legal lead generation becomes a deceptive trade practice. Competitors renting pipeline from lead brokers lose supply.

Owned organic + first-party lead capture is the compliant moat.

Strategic conclusion: every dollar goes into assets we own — rankings, list, brand — not rented leads.

CURRENT STATE

The asset stack is already built and live

100 SEO landing pages

Opportunity-ranked Colorado PI keywords across 6 intent clusters. Unique content, FAQ + LegalService schema, 11-point QA passed, CWV-friendly static build.

Case-value estimator

8-question educational tool → name/email gate → range with disclaimers. Every submission lands in GHL tagged + source-attributed (UTMs, page, keyword).

“Sky” AI phone intake

24/7 voice agent on (720) 821-3784: compliant intake, live Cal.com booking, recording + structured summary to GHL. Outbound speed-to-lead calls new estimator leads in minutes.

CRM rails (GHL)

Tag: “Colorado Personal Injury Lead” + “AI Phone Intake” / “Urgent Review.” Full intake note, recording link, source fields on every contact. Dead-letter logging — no lead silently lost.

Brand + creative

Premium mountain-west design system, real attorney bios linked to whitefordlaw.com, scroll-driven courtroom film (labeled dramatization) for site + future ads.

Production

whiteford-mountain-west-injury.vercel.app · sitemap (106 URLs) · needs: GSC submission, brand domain decision.

ARCHITECTURE

One funnel, two front doors, everything owned

- Traffic-temperature mapping (DotCom Secrets): hot → home/estimator · warm search → matching landing page · cold social → story-first bridge pages (to build)
- 81% of conversions happen at contact 5+ — the follow-up layer is where the compounding happens (email + AI callback + retargeting)
- Everything converts toward traffic we OWN: the tagged, attributed GHL list

The math that governs every channel

Metric	Planning figure	Basis
Blended gross fee / signed case	\$12,000 (conservative)	Mix of soft-tissue + serious; validate vs. firm data
LTGP : CAC floor	3 : 1	Hormozi scale threshold
Max cost per signed case	≈ \$4,000	Fee ÷ 3
Qualified leads per signed case	6–8	50–60% lead→consult × 25–40% consult→sign
Target blended cost / qualified lead	≤ \$500	Ceiling ÷ leads-per-case; organic pulls blend far lower
Cash reality	Patient capital	Contingency fees lag spend 12–18 mo — organic first, paid gated

Every channel is measured on cost per signed case — attribution rails (UTM → GHL) are already live.

Fix the offer before buying traffic (\$100M Offers)

Lead magnet — “Colorado Case Value Snapshot”

Free 2-minute educational read on what drives cases like yours under the 2025 damages law. Reason-why + avatar + interval + container naming. Already built — this is the wrapper.

Consultation — “Claim Game Plan Session”

Named, stacked, concrete: deadline check • evidence-preservation checklist • straight answer on whether counsel is warranted • insurer-conversation briefing. Not another “free consultation.”

The guarantee (law-native)

“You pay no fee unless we recover for you.” The contingency structure IS the strongest trust lever — lead with it everywhere. (Attorney review: costs-vs-fees disclosure.)

The Big Domino (one belief, everywhere)

“Insurers pay full value only to claimants prepared to go to trial — and trial preparation is what a national platform provides from day one.” Masten’s insurer-defense past is the proof story.

Organic engines (months 1–2, \$0 media)

- Finish owned search: GSC submission · brand domain · GBP + review engine · legal/local directory profile layer (profiles only — no lead-gen products)
- Content engine: one weekly “master show” video (false-belief topics, hook-story-offer) → Shorts, landing-page embeds, weekly email, GBP posts · give:ask $\geq 3.5:1$
- Dream 100 — Colorado edition (earned only): safety-beat reporters, CO podcasts, ski/cycling communities, adjacent professionals — relationship + education, never paid referrals (RPC 7.2)
- Warm outreach: Jeff’s one-time network announcement + quarterly story · costs nothing, converts highest
- Newsjack asset: the 2025 damages-cap change is genuinely newsworthy — pitch as education, not promotion

Paid engines — gated, profitable, compliant

Channel	Role	Gate to scale
Google Search PPC	First paid dollar. Layer 1: long-tail “case worth” terms → Snapshot (cheap). Layer 2: high-intent lawyer terms → call (Sky answers 24/7). Branded defense from day one.	$CPL \leq \$500 \cdot \geq 1$ attributed signed case in 90 days
Meta retargeting	Site visitors, estimator abandoners, video viewers. Educational tone, film creative (dramatization labeled).	Launch with PPC; \$500–1k/mo
Meta cold + YouTube pre-roll	Only after organic proves hooks. CO-geo, Snapshot goal, feeds retargeting.	$CPL \leq 2\times$ Google
Google LSA	Economically excellent — but pay-per-lead format needs SB26-174 legal read first.	BLOCKED pending attorney review
Excluded	Lead marketplaces · per-lead brokers · paid referrals · review buying.	Permanent (SB26-174 / RPC 7.2)

Budget arc: \$0 (mo 1–2) → \$4–6k (mo 3–4) → \$8–12k if gates pass → scale toward \$4k/signed-case ceiling. Kill at 2× target CPL with zero qualified leads; 10× winners.

EXECUTION

90-day rollout

Weeks 1-2

GSC submission

GBP + review engine

Warm-outreach announcement

GHL sequences live (your build — next slide)

Sky outbound: LIVE ✓

Brand-domain decision

Weeks 3-6

Weekly master show launches

Directory / profile layer

Dream 100 built + engagement

3 cold bridge pages

Weekly email cadence begins

Weeks 7-10

PPC layer-2 (value terms) + branded + retargeting

First earned-media pitches (caps-change angle)

LSA legal decision

Weeks 11-13

PPC layer-1 (high-intent) if CPL gate passed

First kill/scale review

Quarterly report vs. unit economics

The GHL build — what we need from you

- Workflow 1 — intake nurture: trigger on tag “Colorado Personal Injury Lead” → 5-email Soap-Opera sequence (copy supplied, ready to paste) with waits 15min / 1d / 1d / 1d / 2d · exit on reply, booking, or tag “do-not-sequence” · skip if tagged “client”
- Workflow 2 — weekly cadence: story-first broadcast to the tag (starters supplied), suppressing anyone inside Workflow 1
- Sender hygiene: verified sending domain, monitored reply-to, open/click tracking on, advertising footer + unsubscribe on every send (copy includes it)
- Notifications: “Urgent Review” tag → instant SMS/email to intake team · all bookings → case-worker calendar visibility
- Reporting: source/UTM fields already populate on every contact — build the weekly dashboard: leads by source · sequence engagement · booked sessions · signed cases
- Review engine (phase 2): post-matter review request flow (no incentives) → GBP

Everything referenced ships with this deck: email copy file + landing-page URL map + full strategy doc.

Compliance guardrails & open items

- Attorney-review gate before first paid dollar: contingency phrasing + costs disclosure · LSA vs. SB26-174 · dramatization labeling in ads · email/SMS footers + consent · Sky outbound script · review-request flow · offer names
- Permanent exclusions: no outcome promises, no manufactured scarcity, no purchased leads, no paid referrals, no “best lawyer” claims
- Semrush data refresh pending API units — keyword metrics currently methodology-based estimates
- Decisions needed: brand domain purchase · LSA position · call-tracking vendor (NAP-safe implementation specified)
